Contact the programs to which you may apply to determine the specific courses required.</p> <p>Students considering professional or graduate degrees should take at least two semesters of mathematical courses. The recommended sequences are:</p> <p>1. Math 119, Stat 221 for students who want exposure to calculus and statistics.</p> <p>2. Math 112, 113 for students who want a firm foundation in calculus.</p> <p>3. Math 112, 113, Stat 221 for students who want a firm foundation in both calculus and statistics.</p> <p>THE DISCIPLINE:</p> <p>Physiology is the study of the functions of the body systems. Developmental biology is the study of how genes govern differentiation of cells, tissues, and organs with unique structures and functions. Both disciplines require a foundation of mathematics, chemistry, physics, and cellular biology. Upper-division courses require synthesis and integration of information from many areas of science to allow understanding of such remarkable processes of how the heart pumps blood, how neurons communicate with one another, how insulin regulates blood sugar, or how specific gene products determine the morphology and functional capacity of the nervous system. Knowledge in these areas is expanding rapidly due to application of new techniques in molecular biology. Hence, significant exposure to concepts and techniques of molecular biology is an important component of the major.</p> <p>CAREER OPPORTUNITIES:</p> <p>A major in physiology and developmental biology prepares students to pursue advanced degrees in the biological sciences and non-biological fields or to directly enter into employment. This major provides outstanding preparation for students seeking admittance into professional programs in medicine, dentistry, optometry, podiatry, chiropractics, and pharmacy. For students who have aspirations of doing health-related research, this major will provide a challenging, thorough preparation for entrance into graduate programs and beyond. Graduates of this program will also have the academic and laboratory skills necessary for employment in medical, biotechnological, and pharmaceutical industries. This degree provides students pursuing advanced degrees</p>

in business, public management, or law the knowledge and training necessary to be admitted into professional schools and work in governmental agencies, health care and biotechnical industries, and patent or health care law.

RESEARCH AREAS:

Students majoring in physiology and developmental biology have the opportunity to become involved in mentored laboratory research with the faculty (PDBio 295R and 495R). Those that become highly engaged in research and generate sufficient data to participate with faculty in writing a peer-reviewed primary research article reporting their results can fulfill their capstone requirement (PDBio 495R in requirement 5 of the MAP). Explore faculty research interests under the RESEARCH tab at pdbio.byu.edu.

EXPERIENTIAL LEARNING

Completion of the Physiology and Developmental Biology major requires experiential learning over multiple semesters. Experiential learning can occur in several ways including: 1) Working closely with faculty as teaching assistants (PDBio 349R), 2) as mentored laboratory researchers (PDBio 295R/495R), 3) in research internships (PDBio 399R), 4) in exploring current research by directed literature readings (PDBio 450R), or 5) in the BIO-Innovation and Entrepreneurship (BIO-I&E) Program (PDBio 444 and 445).

FINANCING:

Various private, federal, and university sources of scholarships, fellowships, and grants are available. Advanced undergraduates may be hired to teach labs or help sections for PDBio courses.

Please see the Life Sciences Advisement Center (2060 LSB) for information regarding College and Department Scholarship Requests.

MAP DISCLAIMER

While every reasonable effort is made to ensure accuracy, there are some student populations that could have exceptions to listed
