Students are required to take either the GRE Mathematics Subject Test or the Mathematics Major Field Test the last semester before they graduate. The tests are ETS (Educational Testing Service) standardized assessment tests of undergraduate mathematics. Go to ETS Math Subject Test (http://www.ets.org/gre/subject/about/content/mathematics) or ETS Major Field Tests (http://www.ets.org/mft/about/content/mathematics) for a test description and sample problems. These tests do not appear on the transcript or affect the GPA.
Students must participate in an exit interview before graduation. Recommended Courses are not required to complete the program ECON 110 - Econ Principles \& Problems 3.0
PHSCS 121 - Intro to Newtonian Mechanics 3.0
PHSCS 220 - Intro Electricity \& Magnetism 3.0
Note 1: The courses recommended above can be used to fill General Education requirements.
Note 2: Students who continue toward graduate work should complete Math 372 or Math 473, as well as Math 541 and Math 553.
Note 3: Students who do not plan to pursue a Ph.D. in mathematics are strongly encouraged to complete CS 235 .

## THE DISCIPLINE:

Mathematics is a means of dealing with order, pattern, and number as see in the world around us. The abilities to compute, to think logically, and to take a reasoned approach to solving problems are highly valued in society and are characteristics of any educated person. Mathematics is not just a body of knowledge, but a process of analysis, reasoning, comparison, deduction, generalization, and problem solving.
A mathematician's stock in trade is the ability to solve problems and to explain the solutions to others. Having once determined what the right questions are, solving problems involves analyzing both concrete and abstract situations, relating them to mathematical ideas and using matical ideas and using mathematical techniques to work toward solutions. Explaining the solution involves pointing out what has been solved and why the solution is valid.

## CAREER OPPORTUNITIES:

Majors in mathematics (BS) prepare for a wide variety of careers. Some enter graduate school or professional schools and prepare for careers in such fields as college teaching, consulting, research and development, law, medicine, and business administration. Others take positions in governmen agencies, industrial laboratories, information management firms, or
usiness organizations. All of them spend much time communicating with colleagues about the problems they are solving as they continue to learn more mathematics and share mathematical ideas with others.
