PHYSICIAN ASSISTANT

Entry Level: Master’s Degree

*Please Note: BYU has PA advisement is for students that are interested in becoming a certified physician assistant: https://ppa.byu.edu/physician-assistant.

Physician assistants (PA) are medical providers who are licensed to diagnose and treat illness and disease and to prescribe medication for patients. They work in physician offices, hospitals and clinics in collaboration with a licensed physician. A PA is a nationally certified and state-licensed medical professional. PAs practice medicine on healthcare teams with physicians and other providers.

JOB REQUIREMENTS
What is the exact job title?
- Physician Assistant (PA)

How do I become one?
- Graduate from an accredited PA program.
- Pass the national certification exam.
- Obtain a license in the state in which you wish to practice.

What qualities do I need?
- Communication skills: PAs must explain complex medical issues in a way that patients can understand. They must also effectively communicate with doctors and other healthcare workers to ensure that they provide the best possible patient care.
- Compassion: PAs deal with patients who are sick or injured and may be in extreme pain or distress. They must treat patients and their families with compassion and understanding.
- Detail oriented: PAs should be observant and have a strong ability to focus when evaluating and treating patients.
- Emotional stability: PAs, particularly those working in surgery or emergency medicine, should work well under pressure. They must remain calm in stressful situations in order to provide quality care.
- Problem-solving skills: PAs need to evaluate patients’ symptoms and administer the appropriate treatments. They must be diligent when investigating complicated medical issues so they can determine the best course of treatment for each patient.

TYPICAL WORK DAY
What do they do?
- Physician assistants practice medicine on teams with physicians, surgeons, and other healthcare workers.
- Take or review patients’ medical histories.
- Examine patients.
- Order and interpret diagnostic tests, such as x rays or blood tests.
- Diagnose a patient’s injury or illness.
- Give treatment, such as setting broken bones and immunizing patients.
